

## Actions Intended by Survey Respondents as a Result of the Webinar

<b>Perspective</b>	<b>Intended Action</b>
Educator	include this information in future articles and talks.
Forester	More curious about different saps.
Forester	na
Forester	Will work to identify potential trees available to tap
Forester	Look for different syrups in the marketplace.
Forester	Explore the usage of syrup as a viable non-timber forest product.
Forester	Learn more about producing black walnut syrup and related products
Forester	I will be in a better position to speak with landowners about alternative syrup products
Forester	More information that can be shared with landowners
Forester	Seek more information on making syrup from birch, beech, and Norway maple.
Forester	Try tapping other species for syrup
Forester	Pass possible options on to landowners with stewardship planning
Forester	Better information for landowners
Forester	tap other species
Forester	give different (expanded) considerations to species that may be tapped
Forester	My wife and I are interested in tapping our white and sweet birch trees for syrup.
Forester	Read more about sap extraction.
Forester	consider trying to make syrup from other species
Forester	provide information to landowners
Forester	Adding this into stewardship plans

Perspective	Intended Action
Forester	provide better information to landowners
Forester	Tap Betula lenta trees and make some Black Birch syrup
Forester	none at this time
Forester	Looking into the tapping walnut trees. I know where I can find a few that will never make good lumber.
Forester	inform others
Forester	introduce landowners to topic
Forester	Discuss with one landowner the opportunity to tap species other than Maple
Logger / Forest practitioner	No changes at this point.
Maple/Agroforestry Producer	Likely will stick to tapping maples even though I have significant amount of birch. Also more aware of maple tapping guidelines.
Natural resources specialist	Consider this opportunity for producing alternative client income streams
Natural resources specialist	None, I attended out of sheer interest. However I had shared it with our educators who may add information from it into their maple sugaring programs.
Other (please indicate)	Stop using metal for birch sap collection
Other (please indicate)	Nothing. I watched to learn the feasibility of collecting syrup on our property from trees other than maple and determined it is beyond our ability to work.
Other (please indicate)	Talk with several hobbyist syrup makers
Other (please indicate)	Reach out to farmers, syrup producers, and landowners/managers that I encounter or already work with to consider growing these other tree species
Other (please indicate)	Won't cut down my sycamores
Other (please indicate)	Discuss with hobbyist syrup makers
Woodland owner	Think about it
Woodland owner	None

<b>Perspective</b>	<b>Intended Action</b>
Woodland owner	I will plant some birch trees to tap
Woodland owner	I will be attempting small scale maple syrup production next year. As that wraps up, I may try some birch syrup production.
Woodland owner	Consider birch in a different light. Not sure if I'll DO anything, but I might.
Woodland owner	Share the webinar on NYFOA FB page\!
Woodland owner	Look for other trees to tap for syrup processing
